

## What Is CJC-1295 /Ipamorelin?

CJC-1295 and Ipamorelin are peptides that work together to stimulate your body's natural production of growth hormone (GH). This combination is often used to support anti-aging, weight management, improved sleep, muscle development, and recovery.

**CJC-1295** stimulates GH release over time, while **Ipamorelin** offers a rapid, short-acting GH boost—making them a powerful duo for those looking to feel and function better.

## Frequently Asked Questions

### Is it a steroid or synthetic hormone?

No. These peptides stimulate your body's own GH production, rather than replacing it.

### Are there side effects?

Most users tolerate it well. Possible mild effects include water retention, fatigue, or tingling.

### How soon will I notice results?

Improvements in sleep and recovery may occur within weeks. Muscle tone, fat loss, and skin improvements usually take 2–3 months.

### Is it safe for long-term use?

When monitored and used as directed, CJC-1295/Ipamorelin is considered safe for ongoing support.
